## Risking It All to Save the World

The risk management discipline continues to evolve and gain traction across the nonprofit sector, with organizational leaders recognizing risk management as a mechanism for loss prevention, quality improvement, informed decision-making, and mission advancement. Using results of two recent surveys, NRMCM is pleased to release a new white paper offering insight into:

- How nonprofit teams conceptualize and implement risk management
- How individual nonprofit leaders champion risk management initiatives within their respective organizations
- Recommended baseline standards for risk management practice in any nonprofit organization
- Forecasts for the future of risk management in the nonprofit sector

NRMCM is grateful to the First Nonprofit Foundation for providing a generous grant to support the research and development of this new resource! [Download Risking It All to Save the World.](#)
